

Application Service Providers, or ASPs, are revolutionizing the way the world uses software. TEAM has adopted this concept for its award winning labor and financial management products. TEAM makes technology management simple by making its applications available to you over the Internet. The applications reside on the industry's most powerful servers at our secured data center. At the data center, our servers are monitored 24 hours a day, backed-up every three hours and load balanced for optimal performance. The only thing you need is an Internet connection to use Team's array of products. That's right – no more expensive servers, no more painful upgrades, no more back-up worries; only freedom from technology hassles.

Freedom to focus on your strengths

- No need to purchase or upgrade expensive servers
- All software updates and enhancements are included and loaded for you
- No need for internal or external staff to maintain and support a complex server or network
- Connect from anywhere with an Internet connection
- No expenses incurred from lost data -backups occur every 3 hours
- Your data resides in a secured data center which is monitored 24 hours a day, 7 days a week, 365 days a year
- Predictable, *affordable* monthly technology costs

Break free from technology worries and spend your valuable time on what matters most – your core business. With TEAM ASP, peace of mind is yours because your data is being managed by experts using only the best practices known in technology today. Use TEAM ASP and make your technology issues disappear!

No boundaries, no limits

Implementing a powerful management system has never been so easy.

By using TEAM ASP, you will free yourself from technology management so that you can focus on your core business. As your business grows and prospers, TEAM ASP grows with it. Managing growth and expansion can be expensive and challenging. For example, if you wanted to open an office in another city, what would it take to connect that office to your current system?

With TEAM ASP, your wide area network is built for you. Setting up a user in a remote office can be done in less than 10 minutes.

TEAM ASP gives you the independence to work from home or while you're out traveling. Have you ever been away from the office and needed information from your system? With TEAM ASP, you can log in from anywhere with an Internet connection – a hotel room, your house, or the airport. The power of connectivity is yours with TEAM ASP.

TEAM's ASP Products

WinTeam – Completely integrated financial and labor management system including payroll, job costing, inventory, general ledger and scheduling

TeamTime – Robust telephone timekeeping system that allows remote employees to clock in and out of job sites using any touch tone telephone.

TeamTime ASP has the capability to handle thousands upon thousands of employees clocking in at once. You never have to worry about the cost of housing and expanding dedicated phone lines to automate timekeeping – we do it all for you.

Break away from restrictions

In the past, you may have avoided implementing a new software solution because of the large initial investment needed to purchase the system, its accompanying servers and other hardware peripherals. You might have also been intimidated by the daunting task of implementing and maintaining such a technology solution with your available staff. You're not alone. Many companies have kept using basic packages that do not meet their needs because they want to avoid these costs and challenges. Now, the choice is easy with TEAM ASP.

Financially, it's simple. Pay a minimal set up fee and then pay as you go – it's like your monthly telephone or electric bill. You can scale up or back as needed – the system fluctuates with your needs. This pricing model not only provides an inexpensive way for you to get started, but also makes it easy for you with affordable, *predictable* monthly payments.

Do you lack technology infrastructure? No problem. All you need is a PC and an Internet connection to start using TEAM's ASP products. There is no need for a server, complex network, or lots of money for equipment that will inevitably need upgrading.

About our data center...

If you choose TEAM ASP, your data will reside in one of the most secure data facilities in the country, First National Technology Solutions' (FNTS) Omaha data center. While a common thunderstorm has the power to cripple a business that relies on its own facilities, the FNTS data center will be up and running through practically any situation imaginable.

- 24 x 7 monitoring by on-site security professionals
- Climate control
- Redundant power supplies, including diesel generators
- High-tech fire detection and suppression systems
- Multiple levels of physical and network security
- Network configured by TEAM engineers
- Redundant network connections, power supplies and disk drives on all servers
- Back-up taken off site to Iron Mountain storage facility daily
- Monthly Microsoft® updates loaded for you
